### **Three Good Reasons to Visit the Triton Booth at BAI** Surcharge-Free ATM, New Select-A-Branch ATM Network, Apple™ iPod Giveaway

LONG BEACH, MS — Need a good reason to attend the BAI Retail Delivery Conference and Expo, November 13-15 at Mandalay Bay Resort and Casino in Las Vegas? We'll give you three.

Visitors to Triton's booth (#1730) at BAI will be able to:

1. Find out how the new fully-branded, surcharge-free Select-A-Branch® ATM network can benefit your financial institution,
2. Use our surcharge-free ATM for cash withdrawals, and
3. Enter to win our drawing for an Apple iPod®.

In partnership with Triton and running on Triton RL5000xp ATMs with Prism™ software, Select-A-Branch is a unique, fast-growing, surcharge-free ATM Network that features customized, branded screen content for network-member financial institutions. Each transaction has the same look and feel, the same marketing messages and the same offers presented at their own financial institution so banks and credit unions can send their customers to these locations without fear of losing them to rival financial institutions. Select-A-Branch member-financial institutions benefit from an expanded reach in the community and access to premiere, convenient offsite locations.

And, because the Select-A-Branch Network offers a unique pay-per-use structure with no upfront membership fees, network participation is affordable for financial institutions of all sizes.

By providing a Web technology platform upon which Select-A-Branch was built, Triton's cutting-edge Prism ATM software was instrumental in bringing this new technology to market. The Prism/Select-A-Branch combination clearly demonstrates how Prism allows ATM owners to cost-effectively develop new Web services such as advertising and cross-selling programs, and deploy them across their entire network even if the network does not support TCP/IP and Web protocols.

In addition to learning how the Select-A-Branch ATM Network can expand your ATM presence without the expense of purchasing and operating ATMs, visitors to the Triton booth will have the opportunity to demonstrate our full-line of ATMs for financial institutions including the new full-function FT7000.

Triton's FT7000 comes with an envelope depository and an expansion bay for future upgrades such as check scanning. It is fully XFS compliant and runs Triton's Prism software with 912 emulation support, assuring seamless integration and compatibility into any existing network. Prism's open-architecture platform makes the FT7000, which comes with a vivid 15-inch color display -- the largest available in the industry -- ideal for branding and cross-promoting bank and credit union products and

services. With Web functionality, Prism controls user interactions at the ATM, allowing for customization of ATM screens with advertising and marketing messages, and multimedia content without host intervention. And, because it's a Triton, the FT7000 comes in an easy to upgrade and easy to service modular design. Major components are easily accessible and take only moments to change out with a minimum of tools, which means that financial institutions enjoy maximum uptime.

Additional Triton ATMs that will be on display during BAI include:

- **FT5000xp: Offers Greater Control, Integration and Customizable Screens**  
Triton's FT5000xp, a versatile through-the-wall ATM, offers high performance for a surprisingly low investment. A favorite among financial institutions, with its open architecture and support for industry-standard features such as emulation and leased line communication, the FT5000xp features an Intel Celeron or optional Intel Pentium III 32-bit processor, Microsoft Windows XP and runs Triton's Prism™ software with 912 emulation support which provides banks and credit unions with a simple HTML interface for customized screen content.
- **RL5000xp: Surprisingly Affordable, Value Added Transactions on Customized Screens**  
Triton's PC platform RL5000xp is changing the way financial institutions think about ATMs. The all-new model offers a stunning 10.4 inch LCD display and supports a long list of value-added transactions. This revolutionary configuration offers vendor independence through the XFS specification and makes possible a long list of revenue generating value-added services. And, Prism™ provides banks with a simple HTML interface for customized screen content.
- **RL5000: The Most Cost Competitive PC-Based ATM in the Market**  
There's not another embedded PC ATM on the market that offers the level of performance and cost-competitiveness delivered by the Triton RL5000. In addition to its low price, the RL5000 also offers an extremely low cost of operation, a wide range of dispensers which offers customers the ability to choose the capacity that most matches their usage and it is extremely easy to service. Plus the RL5000 has all the standards: ADA compliance, an Encrypting PIN Pad (EPP), Triple DES compliance, and a surprisingly small footprint.
- **RL2000: The Ultimate in Functionality, For the Ultimate in Flexibility**  
The RL2000, Triton's most flexible ATM to date, packs tons of features into a small, walk-up design, making it the ideal ATM for both high and low-traffic, offsite locations. Its innovative configuration – including an embedded PC-based platform, Microsoft® Windows® CE 5.0 operating system with Triton's X2 technology – makes the RL2000 as reliable as it is convenient. And its CE 5.0 platform provides expandability to meet future compliance and application needs.

Make plans now to visit Triton's booth (#1730) during BAI and learn all the reason why financial institutions are choosing Triton.

---
